

ANSII Codes

Be sure NumLock is on.

Press and hold ALT while typing the 3-digit code (using the number keypad).

The character will appear when you release the ALT key.

For codes in the right column, include a zero at the beginning, making it a 4-digit code.

ALT 174 gives « ALT 0174 gives ®

Symbols may vary significantly (or barely at all) with different fonts and even on different systems!

For instance, 0215 sometimes produces a tiny five pointed star in Courier New, tho just an x on most systems. Go figure...

Size counts too. For instance, 0133 in 10 pt Courier New gives such a tiny set of dots that they appear to be an underline, in 10 pt Times Roman they're quite separate.

These characters can be made **bold**, *italic*, and/or underlined, in text editors such as MS Word.
